To whom it may concern,

Pattillo Construction was originally selected by ZF Wind Power to develop bid documents and support site selection analysis for our new gearbox manufacturing plant in Gainesville Georgia. Because of their high performance, Pattillo earned the right to be the general contractor of the 250,000 ft² facility.

In our ever-changing and time-sensitive project, Pattillo came along side and partnered with us to help bring value through facility design, cost-effective construction solutions and site planning for future growth. Time after time, they demonstrated a no-nonsense approach to getting things done on schedule and always with professionalism. We have witnessed a high level of competence and integrity from everyone in the Pattillo team from project management and design to the construction teams.

ZF Wind Power has developed a high level of trust in the capabilities of Pattillo, and we greatly appreciate the partnership we have formed through our project. The Pattillo team integrated seamlessly with the ZF Wind Power operations. I would (and have!) highly recommend Pattillo for future business.

Sincerely,

Ryan Owen
